Abstract

Artificial Intelligence (AI) is a gift of God. Undoubtedly, AI plays an important role in every sphere of life. Several manual tasks can be automated, thanks to AI. Also, many complex and critical processes can be carried out with ease and greater efficiency with the help of AI. The importance of AI in schools cannot be ignored. In fact, with the onset of AI in education, it has become easier for teachers to impart knowledge and for students to acquire it.

Keywords- AI, Sphere, Century etc.

Introduction-

An economy which is poor in AI can never grow in today's scenario. This is because AI makes our work much easier and less time consuming. The impact of AI can be felt in every possible field one such field is- Using projectors and AI- AI images always have a strong appeal compared to words. Using projectors and visuals to aid in learning is another form of great AI use. Use of AI such as projectors within the schools and colleges can take the interaction and interest levels right up and also improve motivation. AI footprint in the education sector If we talk about AI and education, then the penetration of AI media within the education sector has now grown.

Analysis-

Importance of AI in education .The role of AI in the field of education is four- fold: it is included as a part of the curriculum, as an instructional delivery system, Education is essential in corporate and academic settings. In either case, the use of AI can help students understand and retain concepts better. Factors affecting AI in education The enormous challenge teachers are facing in our society due to the rapid expansion of knowledge. The modern technologies are demanding that teachers learn how to use these AI in their teaching. Another barrier given is reliability Impact of AI on education In educational context, AI has the potential to increase access to education and improve its relevance and quality. Asserted that AI has a tremendous impact on education in terms of acquisition and absorption of knowledge to both teachers and students through the promotion of: In contrast to memorization-based or rote learning, promotes learner engagement as learners choose what to learn at their own pace and work on real life situations' problems.

Conclusion-

Researchers have found that typically the use of AI leads to more cooperation among learners within and beyond school and there exists a more interactive relationship between students and teachers. AI promotes the manipulation of existing information and to create one's own knowledge to produce a tangible product or a given instructional purpose. Integrative learning:
